SUMMARY

Lead Product Manager • 12 years in tech, 6 as PM • B2C gaming, EdTech, OTT. Owned monetization, retention and lifecycle experimentation at scale. Built and shipped an agentic AI support agent end to end (RAG, tool use, 62-test eval harness).

WORK EXPERIENCE

Head Digital Works, Hyderabad (Real Money Gaming — A23 Rummy) | Lead Product Manager June '23 – June '26
Led the player lifecycle from first deposit through month 4, managing two PMs; one of three PMs retained after the RMG ban in India.

- **Revenue growth & monetization**
 - Unlocked **~Rs 1 Cr / month** in incremental revenue by benchmarking competitor service fees and A/B testing a points-rummy fee increase on user-split queues with separate liquidity — wait time and wager share as guardrails — before rolling out to 100%
 - Grew **D30 revenue / player by 25%, net revenue by 14% and High-Value Players by 30%** per cohort by commissioning a VIP-propensity ML model to identify high-potential users early, surfacing through 329 CS calls that 55% of them did not know their offers, launching a personalised Early-VIP page, and running A/B experiments on milestone purchase bonuses and short-cycle leaderboards
 - Retained **2.5% more withdrawal value** on-platform by capturing the peak-intent moment via game-end UX redesign, cutting GST pressure by 0.7 pts
- **Engagement & retention**
 - Ran an A/B experiment on the player matchmaking system to optimize retention and revenue for new players — **D7 retention +4 pp (41.7% → 45.4%)**, first-week revenue / player +4%
 - Conceived Rematch Request, capturing peak competitive intent at game end — **+5% games / player / day** with zero cannibalization of existing re-entry flows
 - Increased **D30 retention by 2%** through A/B experiments on the new-player missions and leaderboard experience
- **Early-month retention & revenue strategy**
 - Formulated a **~Rs 98 Lakhs / month** incremental revenue strategy by surfacing the 60% month-one churn leak; secured a 6–9 month executive mandate and led a 3-member product-analytics-CRM squad owning months 1–4 with P0–P4 revenue-prioritized cohorts
- **0→1 and new revenue lines**
 - Built a **~\$12K / month** ad-revenue stream from zero after the RMG ban by designing the ads + Gems economy monetization model — placement strategy, rewarded-video experimentation, segment-based rewards and ad-frequency controls — with DAU and tourney participation as guardrails
 - Led discovery for a 0→1 product in a new regulated industry (user interviews, benchmarking; education-first positioning); owned the MVP roadmap and secured CEO approval

Interview Kickstart, Remote (EdTech) | Product Manager Dec '21 – Mar '23

- **\$170K / month** recurring revenue and +16% sales by integrating a US BNPL provider; +20 sales / month from a "0% APR FlexiPay" model
- +20% sales from bottom-of-funnel UX (+43% on the critical onboarding step); **+\$375K / month** by internationalizing the LMS for India with localized payments

Viacom18, Mumbai (Media – OTT, Voot) | Product Manager May '20 – Nov '21

- **\$182K** recurring revenue and +32% subscribers via one-click Amazon IAP on FireTV; one-click login lifted logged-in users 43–50% across FireTV, AndroidTV, LG and Samsung
- Launched Voot on LG WebOS (+30% TSV) and Samsung Tizen (+50% visitor → viewer conversion)

Narayana Learning, Bangalore (EdTech) | Technical Leader July '18 – Jan '19

- Led a 5-member team to launch a parent-teacher app and an e-learning app for 300K+ students — **\$13M+ revenue**, 1M+ users onboarded

FastFilmz Media, Bangalore (Media – OTT) | Senior Software Engineer July '16 – Mar '18

- Led mobile-app teams to 100x growth in 1.5 years — 1.5M+ downloads, 50K+ monthly subscribers, **\$350K+ revenue**

Tarams Technologies, Bangalore (IT Services) | Senior Software Developer July '13 – May '16

- Built mobile apps for healthcare, news and cricket clients (\$10M+ revenue), incl. The Hindu (load time ~25%)

AI / AGENTIC AI

IIT Madras (Pravartak) | Professional Certificate, Agentic AI & Applications Sept '25 – May '26

- Built an e-commerce AI support agent solo — baseline → LLM → RAG → tool use → memory → adaptive policy → deployment → evaluation (LangChain, FAISS, FastAPI, LangSmith); public repo: github.com/ak13490/ai-support-resolution-agent
- 62-test evaluation harness (quality, consistency, safety, PII) caught PII leaking into logs and a prompt-injection bypass; **~84% deflection at ~\$0.001–0.002 / query** via deterministic tool routing and 3-layer PII masking

EDUCATION

Indian School of Business | PGP in Management (IT Management & Marketing) • GMAT 760 Apr '19 – Apr '20
IIIT Hyderabad | B.Tech, Electronics & Communication Engineering Aug '09 – May '13
